

Nobel Prize Winner

Dr Ferid Murad and **L-Arginine**

Dr Ferid Murad (MD-Ph.D) was awarded the 1998 Nobel Prize in Medicine for his groundbreaking research in nitric oxide pathway signaling. Since L-Arginine is the body's primary source of Nitric Oxide synthesis, this sparked a tremendous amount of interest in L-Arginine as a therapeutic agent in both pharmaceutical and nutraceutical fields. Dr Murad's research has since been validated by hundreds of scientific clinical studies.

Dr Ferid Murad says:

"Hypertension, diabetes, atherosclerosis, tobacco use and perhaps obesity where your blood vessels are too constricted because you have endothelial dysfunction, the blood vessels don't make enough nitric oxide or they remove it too quickly. If you enhance the production of nitric oxide, the blood vessels will widen, decrease the blood pressure, increase nutrients and oxygenation of the tissues downstream".

He thinks the product like ARG1+ with L-Arginine and antioxidants coming from various fruit, grape extracts and other substances will enhance the effects of nitric oxide production and activity and that nitric oxide will become more important in the future as the population gets older.

Forever ARG1+ rated the best L-Arginine supplement on the market.

Dr Murad will be working with Forever Living Products. The amount of exposure that this will give him, will help Dr Murad find suitable collaborators and trainees, to assist him in doing things that he is not presently able to do in other parts of the world.
